Guide

The following steps are recommended for your survey:

- Create questions
- Add conditional branching
- Customize look and feel
- Set privacy and behavior
- Translate survey
- Publish survey
- Analyze collected data

Group - 2E

Introduction

Hello there!
Welcome to this survey! We are a group of researchers from Dalhousie University, Canada. Recently, we conducted an empirical study involving 85 reproducible bugs from Stack Overflow posts. Our aim was to understand two main aspects: (1) the edit actions that can be employed to complete code snippets for bug reproduction and (2) the information that enhances the reproducibility of bug reports. Our investigation has yielded several interesting findings, and we are seeking your feedback on them.

We reproduced 85 bugs and discovered they could be reproduced using 10 edit actions. To enhance their reproducibility, 5 main information categories need to be present. The edit actions and information categories are described below.

Edit Actions
Input Data Generation: Generating input data which simulates the data used for training the model.
Neural Network Construction: Reconstructing or modifying the neural network based on the information provided
Hyperparameter Initialization: Initializing the hyperparameters for training, such as batch size and number of epochs
Import Addition and Dependency Resolution: Determining the dependencies in the code snippet and adding the missing imports.
Logging: Adding appropriate logging statements to capture relevant information during reproduction
Obsolete Parameter Removal: Removing outdated parameters or functions to match the parameters of the latest library versions
Compiler Error Resolution: Debugging and resolving compiler errors that arise due to the errors in the provided code snippet.
Dataset Procurement: Acquiring the datasets and using them to train the model
Downloading Models & Tokenizers: Fetching pre-trained models and tokenizers from external sources.
Version Migration: Updating the code to adapt the changes introduced in newer library or framework versions.

Information Categories
Data: Shape of the input data, type of data, data distribution.
Model: Neural network architecture, number of layers, neurons, activation function for layers.
Hyperparameters: Batch size, epochs, optimizers, loss function.
Code Snippet: Training code snippet, evaluation script, data preprocessing, and transformation operations.
Logs: Compiler error logs, training error logs

Demographics

New text | New question | New question from library / other surveys

Question 1 Edit | Add to library | Delete

1. What is your relevant work experience with deep learning?

- ◯ <1 Year
- ◯ 1-5 Years
- ◯ 5-10 Years
- ◯ >10 Years

Split section | New text | New question | New question from library / other surveys

Question 2 Edit | Add to library | Delete

2. What is your relevant experience with deep learning bug fixing?

- ◯ <1 Year
- ◯ 1-5 Years
- ◯ 5-10 Years
- ◯ >10 Years

Split section | New text | New question | New question from library / other surveys

Question 3 Edit | Add to library | Delete

3. What is your current occupation?

- ◯ Software Practitioner (Software Engineer, Deep Learning Engineer, Machine Learning Engineer etc.)
- ◯ Researcher (Masters/Doctoral Student, PostDoc, Faculty)

Split section | New text | New question | New question from library / other surveys

Question 4 Edit | Add to library | Delete

4. What are the deep learning frameworks you have worked with?

- [ ] Tensorflow
- [ ] PyTorch
- [ ] Keras
- [ ] Other

Split section | New text | New question | New question from library / other surveys

Question 5 Edit | Add to library | Delete

5. What challenges are associated with reproducing deep learning bugs in your day-to-day activities?

Bug #1

Given the issue description and the code snippet. Please reproduce the bug and select the most appropriate edit operations and critical information needed to reproduce this bug.

To help the reproduction process, we have provided the sample edit operations here.

Original Issue Report: https://stackoverflow.com/questions/59325381/low-accuracy-after-training-a-cnn

Description:

I try to train a CNN model that classifies the handwritten digit using Keras, but I am getting low accuracy in the training (lower than 10%) and a big error. I tried a simple neural network without concolutions and it didn't work as well.

Could anyone advice me on how to improve my model?

Code Snippet: You can use this Colab notebook as the base notebook to start the reproduction process: https://colab.research.google.com/drive/1k9dPnV43s-RSCSR3aKNkpVKxb1s97Q-d?usp=sharing

Hints:

1. Code Snippet, Logs, and Data can be useful information for reproducing the bug.
2. Input Data Generation, Import Addition, Version Migration, Hyperparameter Initialization and Compiler Error Resolution can be useful edit actions for reproducing the bug.
3. Focus on the statement: "I tried a simple neural network without concolutions and it didn't work as well".

Question 6 Edit | Add to library | Delete

6. What are the edit operations that could be used to reproduce this bug?

- [ ] Input Data Generation
- [ ] Hyperparameter Initialization
- [ ] Logging
- [ ] Compiler Error Resolution
- [ ] Downloading Models and Tokenizers
- [ ] Neural Network Construction
- [ ] Import Addition and Dependency Resolution
- [ ] Obsolete Parameter Removal
- [ ] Dataset Procurement
- [ ] Version Migration

Split section | New text | New question | New question from library / other surveys

Question 7 Edit | Add to library | Delete

7. Why do you think these edit operations could prove useful in reproducing the bug?

ew text | New question | New question from library / other surveys

Question 8 Edit | Add to library | Delete

8. What are the critical information components that could help the reproducibility of this bug?

- [ ] Data
- [ ] Hyperparameters
- [ ] Model
- [ ] Code Snippet
- [ ] Logs

Split section | New text | New question | New question from library / other surveys

Question 9 Edit | Add to library | Delete

9. How do you think the selected critical information could be useful in reproducing the bug?

Split section | New text | New question | New question from library / other surveys

Question 10 Edit | Add to library | Delete

10. Did you implement any additional operations or actions beyond those suggested by us? Please let us know your thoughts.

Bug #2

Given the issue description, and the code snippet. Please reproduce the bug, select the most appropriate edit operations and critical information needed to reproduce this bug.

To help the reproduction process, we have provided the sample edit operations here.

Original Issue Report: https://stackoverflow.com/questions/48221692/create-a-square-function-estimator-with-keras

Description:
I'm still very new to neural networks. I try to achieve the following with Keras:

I have a set of data where f(x) = x^2 + 3. Like this

```
x      f(x)
 -10    103
-9.9    101.01
-9.8    99.04
-9.7    97.09
...
9.7     97.09
9.8     99.04
9.9    101.01
10     103
```

So I try to build a model that can predict values f(x) based on x. I think that must be a simple thing but I couldn't find any hint. I get only outputs ranging from 0 to 1 (I guess due to normalization?) and they also seem to be bad.

I suspect I need to somehow cater for the fact that expect an interval value as an output, not a nominal or ordinal value. Any idea?

Code Snippet: You can use this Colab notebook as the base notebook to start the reproduction process:
https://colab.research.google.com/drive/1xbP-Gl1VqRzychl9pFGvrGJPWr_7Yj1E?usp=sharing

Hints:

1. Logs, Model and Code Snippet can be useful information for reproducing the bug.
2. Neural Network Construction, Import Addition, Hyperparameter Initialization, Logging, and Dataset Procurement can be useful edit actions for reproducing the bug.
3. Focus on the statement: "I get only outputs ranging from 0 to 1 (I guess due to normalization?) and they also seem to be bad."
